

ROOFLIGHTS
ARE GREAT BUT THERE'S
TOO MUCH
LIGHT

Rooflights are great... but there's too much light.

Hmmm... great idea, get natural light into enclosed spaces – put a hole in the roof and cover it with glass or another fancy structure.

In the winter everyone loves the sun and the sky. In summer... the sun takes an inconveniently high angle of attack and creates lots of glare and heat! Lovely if you're just walking through, but a nightmare for those who work in the area.

Can you shade rooflights with blinds that move and let you enjoy the winter sun and yet protect you from the summer sun?

Yes.

There are certainly a few different products that allow you to do this.

- Pleated
- Roller
- Blackout
- Tensioned
- Slatted

We can advise on what's best as it all depends on the size, shape and what you want to achieve.

Take some photos of your rooflight and email them to us on sales@interlaceblinds.com and we'll ring you back and we can have a chat.
