2000 SERIES PLEATED BLIND

The 2000 Series Pleated Blind is a modern and compact shading method. It is suitable for all kinds of windows in commercial and residential environments but is especially effective where space is at a premium, and also in roof areas. The system is neat and attractive yet sufficiently durable to withstand the conditions found in most commercial installations.

There are two styles that are generally regarded as the mainstay of this product; the free-hanging style for vertical windows and the popular skylight version for roof windows.

The 2000 Series Pleated Blinds are manufactured with a system which controls the shape of the blind and ensures that the pleats are equally spaced throughout the blind.

Rooflight blinds are prevented from sagging by tension cords, which provides support for both the fabric and the sliding rail. Rooflight blinds can be manufactured in many different shapes most commonly found in roof areas. mechanics of the system.

APPLICATION

- Vertical windows
- Rooflights
- Sloping windows
- Shaped
- Doors

CONTROL

- Manual hand
- Cord
- 24v Electric

INTERLACE WARRANTY

InterLace 2000 Series Pleated Blinds are covered against defective manufacturing for 12 months from the date of installation.

This warranty does not cover misuse, damage caused after installation, or vandalism. InterLace liability is limited to the replacement of defective products like for like only. InterLace is committed to a program of continuous product improvement.

Please be advised that specifications, performance, appearance, and dimensions of InterLace products are subject to change without notice. InterLace reserves the right to the final decision in the event of any warranty claim.

HARDWARE

- Metal with white powder coated finish
- Custom RAL finishes available

FABRIC

The fabrics are pleated into 20mm pleats and manufactured in polyester. The fabric range is comprehensive and our collection includes solid colours, translucent and opaque fabrics for every situation.

The introduction of 'honeycomb' pleated fabric brings with it the benefit of no visible holes, therefore cutting out the pin prick light holes associated with the standard pleat. This, coupled with the additional solar protection, makes it excellent for accommodation and residential applications.

FIXING

- Top fix
- Face fix
- Custom fixings available
- Side fix

SIZE

	Freehanging	Rooflighting
Max Width	2000mm approx	1700mm approx
Max Drop	3000mm approx	
Max Draw		3000-4000mm approx

Maximum sizes subject to weight of fabric used.

SPECIAL OPTIONS

The 2000 Series Pleated Blind also has a framing system which allows installation within the opening section of a window to allow the blind to move with the window, close to the glass. This is non-mechanically fixed and can be coordinated to the colour of the window making it a seamless and functional system. This is particularly useful where windows are inward opening. 2000 Series Pleated Blinds can be customised in various ways. Please contact the sales office with your requirements.
